EXPERIMENT: 8

Forensic Analysis of evidential image using Pro Discover Tool

Date: 04/03/2026

AIM

Using **Pro-Discover** Basics do experimental analysis of a Pro-Discover image and write down an investigation report.

THEORY

The ProDiscover® Family of computer security tools enables systems administrators, consultants, and investigators find the data they need on a computer disc. Whether you suspect your system has been hacked or are looking for discoverable evidence in a civil proceeding or criminal investigation, ProDiscover® will make your job easier, improve your productivity, and preserve the data needed for any legal proceedings.

FEATURES:

Incident Response: Quickly and positively identify intrusions to your systems without taking your system down. Get any corrupted system back online quickly and gather the evidence needed to prosecute an intruder.

Corporate Policy Compliance Investigation: Check for policy violations or conduct internal investigations remotely through your company's network.

e-Discovery: Improve your productivity and ensure compliance in any civil discovery action. Quickly search large data sets and find the documents you need. Preserve critical "last accessed" metadata and document your results.

Computer Forensics: Find all the data, even in hidden HPA sections, Alternate Data Streams, or Slack space. Create hash signatures for all files and compare them to the information from the

National Drug Intelligence "Hashkeeper" database. Automatically generate reports and "evidentiary quality" information that will hold up in court.

ALGORITHM:

1. Open ProDiscover and click on New Project. Enter the project number, project name, and description

2. Select the Capture image option from Action in the toolbar

3. Select the source disk, destination path for saving the data captured, Investigator name, etc, and then the ProDiscover analyzes the source disk.

4. Select open image and choose the acquired image, click on content view, and select an image. or click on Action, then Add Image and select the image, then click on Content View and select image

5. To recover the image, right-click on the deleted file and add the investigator comment, then right-click and copy the file to a folder.

6. To generate a Report click on view →report
